Amendments to the Specification

Please replace paragraph [0061] on page 11 with the following amended paragraph:

[0061]   When it is determined in Step 11 that ilet property is not specified in the anchor tag, CPU 400 stores the <u>ADF</u> ~~Java AP software~~ in storage area 409b (Step S19). CPU 400 carries out the processes of Steps S20 and S21, which are similar to those of Steps S15 and S16, and stores the received JAR file in cache area 409b (Step S22).

Please replace paragraph [0063] on page 11 with the following amended paragraph:

[0063]   <u>Referring to Fig. 9,</u> CPU 400 determines by referring to the ADF of the Java AP software whether the ADF does not contain "IletPreserve" (Step S30). When it is determined that the ADF does not contain "IletPreserve"; namely, that the Java AP software can be stored in mobile phone 40, CPU 400 causes liquid crystal display unit 405 to display a message saying <u>"store application?"</u> ~~"Is an application stored?"~~ (Step S31).
